DETAILED ACTION

1. This Office Action is in response to the applicant's response filed April 15, 2002.

Response to Arguments

2. Applicant's arguments with respect to claims 1, 5, 21 and 24 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

4. Claims 1, 2, 5-7, 21-22 and 24 are rejected under 35 U.S.C. 102(e) as being anticipated by **Barnett et al** (US 6,336,099), hereinafter referred to as **Barnett**.

-Regarding claims 1, 5, 21 and 24, **Barnett** discloses a system for distributing and printing packets of information to individuals at selected retail locations upon request by said individuals, said system including (see figure 1): means for creating said packets of information in a digital format; a wireless network, lines for transmitting said packets of information to said retail locations (examiner interpreted the personal computer 6 as a retail locations), (see figure 8, "electronic coupon distribution may also be carried out via digital satellite communication link, thus avoiding the need for hardwired (i.e. PSTN) connectivity between the repository and the

Art Unit: 2664

remote user computer.”, col. 6, lines 43-47); and a network of printer appliances (8) at said locations, each of said appliances being adapted to: receive said transmitted packets of information from said wireless network; process and store selected packets of information from all those received; convert said selected packets of information into a printable format for distribution to said individual (see figure 9); receive and process a request to print said packets of information by said individuals; and automatically print said selected packets in response to said request.

Barnett et al teaches a method and system for the electronic distribution for product redemption coupons to remote personal computers located at user's homes. A centrally located repository, such as users' homes. A centrally located repository, such as an online service providers or web site on the Internet, stores packets of coupon data for downloading on demand to the user's computer.”, see abstract.

-Regarding claims 2, 6, 22, **Barnett** further teaches packets of information are redeemable retail coupons (see figure 5).

-Regarding claim 7, **Barnett** also teaches wherein said means for creating includes means for importing textual and graphic information relating to said packets, (see figure 5).

Allowable Subject Matter

5. Claims 3, 4, 8-13, 23 and 25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
